IT PILOT · READINESS CHECKLIST

Cleared for a small takeoff.

Six stages from first PCs to a go/no-go call. Deploy in minutes, not days, then Re-Imagine at scale.

IT PILOT · DEPLOY IN MINUTES, NOT DAYS

Pilot small. Re-Imagine boldly.

Pick a few PCs you already own, connect them to your cloud workspaces, then test the day people will actually have.

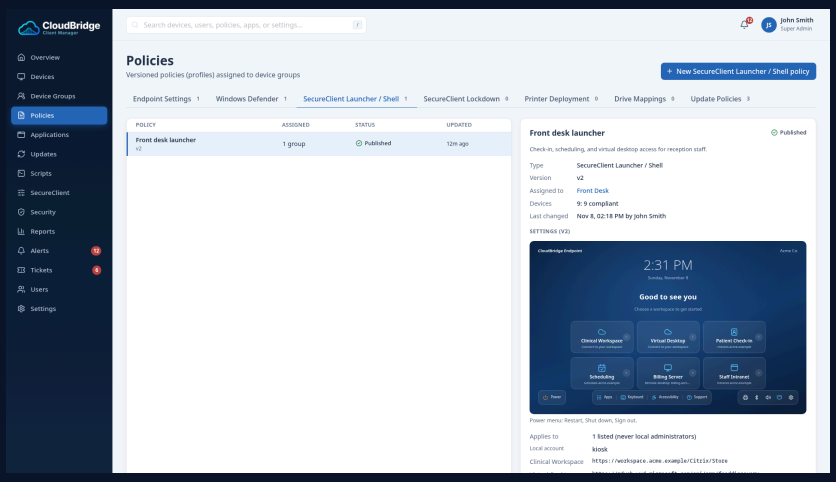

ITEM	WHAT TO KNOW
Supported Windows	All supported Windows versions except Windows 11 Home
Network	No inbound ports
Intune	Works with or without Intune

1 · Scope

- [ ] Pick a small set of pilot PCs you already own and name an owner
- [ ] Start with PCs you were planning to replace or swap for thin clients
- [ ] Decide which device group they belong to and write down how success will be judged

2 · Apps

- [ ] List the cloud workspaces each group uses: Citrix, Azure Virtual Desktop, Windows 365, Omnissa, Parallels, Amazon WorkSpaces, Workspot, Google or others
- [ ] List the approved local apps that still need to run on the PC
- [ ] Remember: users will see only the apps admins deploy and manage. Test each workspace connection during the pilot

Front desk launcher policy and workspace layout.

3 · Lockdown choices

- [ ] Review the keyboard filter list and pick the shortcuts to block
- [ ] Review the blocked system tools list
- [ ] Decide whether to test the optional clean-state-on-restart setting, and how it fits your update routine

4 · User comforts

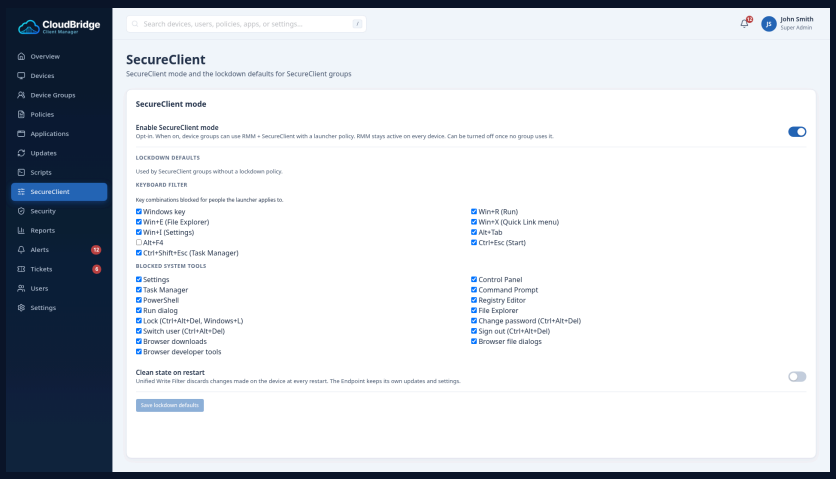

- [ ] Printers: decide who adds them, users or admins
- [ ] Brief users on Power, the tray and Get Help (hand them the Quick Reference)

5 · Visibility

- [ ] Confirm pilot PCs appear in Devices and Device Groups
- [ ] Watch Alerts, Updates and Application Deployment during the pilot
- [ ] Route Get Help tickets to a named person

6 · Review

- [ ] Collect user feedback after the first week
- [ ] Compare the pilot with the thin client hardware or Linux thin OS option you were weighing
- [ ] Decide whether to expand, adjust or stop

Review the keyboard filter and blocked system tools.
